Utilize Katalon to create test-cases to press buttons, open windows, and input in textboxes.

Test cases involve working through a user's actions to get to the desired outcome:

Item	Object	Input	Output
→✕ 1 - Open Browser		""	
→✕ 2 - Navigate To Url		"file:///C:/Users/alex8/OneDrive/Des	
→✕ 3 - Click	button_Show current signature librar		
→✕ 4 - Click	button_Add new signature		
→✕ 5 - Set Text	textarea_Store new signature_messag	"message"	
→✕ 6 - Click	button_Add new signature to library		

Test-case will emulate the user's inputs and to any errors or pass:
